

The slim line audio kit is ideal for applications with limited space next to a door or gate entry point. The kit comprises of an audio wall mountable handset made from white ABS plastic with a lock release button, a 12V AC transformer and the single button external panel made from a die cast alloy.

Operation:-

When a caller presses the call button this will produce an electronic call tone at the telephone handset. When answered, the caller and occupant can have a two way conversation. If required the occupant can then release the door/gate by pressing the release button on the telephone handset.
